

Every IdentityIQ Log with One Server Login

Eliminate time-consuming logins to individual servers to get the logs you need and simplify your IDIQ troubleshooting. With the EasyView plugin, users can download all logs to a centralized location and use a single-entry point to view all tasks that need attention. Automation is built into the application to highlight and alert you of new error messages, enabling users to more rapidly resolve issues.

The EasyView Plugin for IdentityIQ from MajorKey is a native IdentityIQ solution built specifically to make your job easier. Simply login, view, assign and deploy.

- **Widen Your Perspective.** View all IDIQ server logs from one vantagepoint. No more logging into individual servers to search or download logs for review.
- **Eliminate Barriers.** Get access to every log without needing multiple teams and give your support teams the information they need—fast.
- **Smart Supervision.** Automatically receive alerts about important error messages. Spend less time finding the problem and more time deploying the solution.

- **Nimble Security.** Speed up the resolution of your onboarding and offboarding process for every request with confidence that all your security requirements are being met while minimizing your response time.

A Native Solution Backed by Unparalleled Experience

MajorKey delivers and implements SailPoint services across enterprise operations—providing more than a one-time technology solution.

Our team brings with it more than a decade of experience with SailPoint solutions. A top 5 Admiral delivery partner, MajorKey is the only partner certified for L2 support for IdentityIQ in North America. Our unparalleled depth of knowledge includes building custom integrations and plugins, support and managed services, and advisory services for identity access management.
