

Identity Security Advisory Services

The identity security landscape changes fast—and often—making it difficult to modernize and deploy Identity security initiatives while decreasing costs. The solution is a security-centric approach that transitions Identity security from its traditional role as a fixed control point, to a key enabler of your governance structure.

MajorKey's experienced global team delivers this with careful analysis that produces a strategic, three-year roadmap that links each step with your business goals, security concerns, and compliance requirements. We deliver for you a realistic vision and executable strategy to mature your organization over time, establish an effective Identity Security Program, define new processes and absorb new technologies at velocity.

An Informed Security Strategy

We work with your team to develop an organizational structure equipped to manage emerging concerns related to the shifting identity security landscape by:

- Facilitating focused workshops to document business processes and challenges, organizational priorities, mandates, compliance requirements and timelines.
- Creating a business case that outlines and addresses the business benefits, problem mitigation, potential operational cost savings, risk reductions, and impact cost.
- Developing a tactical plan with specific, short-term milestones that builds momentum and credibility as you realize a series of quick wins.
- Delivering a resource plan that sets expectations for the involvement of current team members and identifies any staffing gaps that require attention.
- Defining success for each initiative and ensuring that success can be measured.
- Drafting a "post-advisory support plan" to ensure continued organizational health, growth, and momentum after completion of the advisory effort.

Strategic, step-by-step momentum toward a more robust Identity and Access Management implementation—entirely in tune with your security posture.

Additional Advisory Services
